

The screenshot displays a web application interface for "Long Term Services and Support". The interface is annotated with several labels and arrows pointing to specific UI elements:

- "Top Level" Navigation:** Points to the top navigation bar containing tabs like Home, Clients, My Lists, Alerts, Dashboard, Assignments, and Client Details.
- "Global" Header:** Points to the header area displaying "Long Term Services and Support".
- "Global" Menu:** Points to the "Menu" and "Account" buttons in the top right corner.
- "Workspace" Header Bar:** Points to the header bar of the current workspace, displaying "MFP — Resident Contact Sheet".
- "Workspace":** Points to the main content area of the workspace, which contains the "Resident Contact Sheet Form".
- "Left Side" Navigation:** Points to the left sidebar navigation menu, which includes sections like "Client Common Links", "MFP Program Menu", and "Ongoing Peer Support".
- "Client Summary 'Drop Down'":** Points to the "Client Summary" link in the left sidebar.
- Active Tabs:** A note states "Active" Tabs are highlighted in a lighter shade and with bolded text, pointing to the "Client Details" tab.
- Client Information:** A note explains that "Top Level Navigation 'Tabs' allow the user to navigate from area to area. They contain an icon to help the user to quickly identify an area of interest."
- Global Menu Activation:** A note states "The 'Global Menu' can be activated by hovering over the text with the cursor."
- Client Common Links:** A note explains that these links are "Common" to every "Client Screen" and are visually different from the "Menu" below.
- Module specific "Menus":** A note explains that these links are stretched left to right and are coupled with an icon to emphasize importance.
- Active Links:** A note explains that "Active" links are highlighted in blue and provide an added visual cue as to what "Page" the user is currently in.

The main content area displays the "Resident Contact Sheet Form" for a client named Nicolas Quinones. The form includes sections for Client Information, Contact Sheet Information, and Visit Date & Peer Information.

“Workspace” Header Bar

While viewing a “New”, “Create” or “Add” screen, the user has the option to “Cancel” their progress. This link redirects the user to the previous page.

While in a “View Details” screen, the user has the option to go “Back To” the previous page or appropriate section.

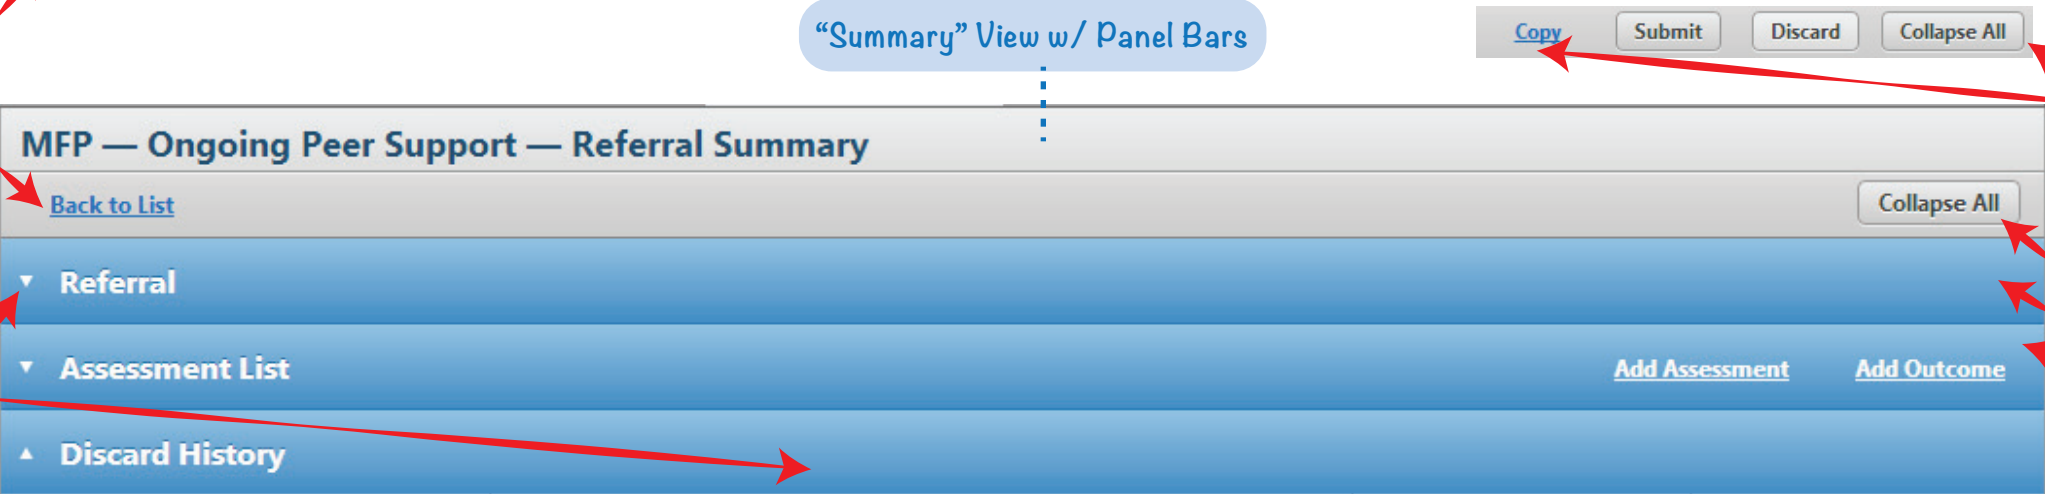

While in an “Edit” screen, the user is not presented an option to “Cancel” or go “Back To” any page. This is to minimize confusion and risk of losing unsaved changes. The point is to force the User to either “Save” their progress or force the user to consciously select the “View” Toggle. Then, from the “View” mode, the user is able to see that their changes were not saved and that they now have the option to go “Back To” a particular pages.

While in “List” or “Summary” screen (ie. Up one level from a “Form” screen), the user has the option to go “BackTo” a particular page.

Collapsible Panel Bars: Clicking anywhere on the panel bar will either expand or collapse additional information.

All “Buttons”, “Indicators”, “Add”, “Manage” or other Links that redirect you the user to a view other than “Back To” a previous page are displayed to the right.

While viewing a “New” or “Create” or “Add” screen, the “Workspace” Header bar displays the “New” indicator to cue the user that they are, in fact, working in a new “Form” etc.

After the user has “Saved” a “New” Form, the user will typically be redirected to a “View” Mode of the form. The “Workspace” header will display the “View” mode indicator as “Active” and the “Edit” Mode Toggle as “Inactive” if available.

Vice Versa, if the User happens to be in the “Edit” mode of the form, the “Edit” indicator is “Active” and the “View” toggle should display as “Inactive”.

While in “Edit” mode, the user has the option to “Save” their progress or changes.

Links that redirect you the user to another view or window, other than “Back To” a previous page, will be displayed align right.

When Links and Buttons are displayed simultaneously, Links should always be closer toward the inside, followed by general Buttons and then the “Collapse/Expand All” toggle button furthest to the Outside

Screens that have “Collapsible Panel Bars” will display an “Expand/Collapse All” toggle button ONLY if there are two or more panel bars and will be hidden if there are only one or no panel bars.

LAH Transition Funds

Date of Expenditure	Amount	Category	Description	Status	Action
08/31/2012	\$ 23.00	Funds to obtain housing	asdf	Discarded (sadfadsf)	Edit

Overall Funds Summary are located at the top along with all other "Totals".

Fieldsets for adding new funds are located below the "Funds Summary"

The last sections display the list of newly added items in a table.

Clicking the "Add Fund" button will update the corresponding table with the newly added data and clear the form for additional funds. This cycle can be repeated.

Clicking "Edit" from the table row will populate the form above with the data from the selected row and allows the user to make changes.

Label

All Program Modules in LAH have a "Summary" Landing Page which consist of "Panel Bars" containing "Summary" information of the respective Sub-sections.

"Add", "Edit" or view "Details" links are displayed on the panel bar header if access permits. These links always align right.

Summary information are displayed in standard side-by-side "Label/Data Element" Fashion.

When no summary information is available, a message should appear like the following example.

MFP - Program Modules, Panel Bars, and Summary Information

Typical “Summary” Landing Page

Summary information is displayed in standard side-by-side “Label/Data Element” Fashion.

When no summary information is available, a message should appear in place of the label like the following example. → “There is currently no Data to Display”

“List Filter Area”

While in a “List” screen with “Filter” or “Show me” options, the filters are fixed at the top of the workspace.

The “Filter” button applies the filter and the results can be reviewed from the table

All Other Links or Buttons that are not associated with the input fields are displayed align right.

For tables that allow the user to “Check” or “Select” multiple rows, the column header will contain a “Select All” or “Check All” checkbox.

After the results have been generated, the user can apply further actions to previously selected items with additional controls located at footer of the table.
